The KS-F 45G customer stopper remains steadfast – come what may. It owes this property to special steel springs which are galvanised for long service life. Corrosion doesn't stand a chance when it comes to the KS-F 45G. The threaded bushings made of die-cast zinc are also optimised for load capacity and durability. Two posters are reliably protected against moisture and fading by UV-stabilised anti-reflective foils, which protect against splash water.
